

SEEKER-FIRST SOCIAL COLLECTING

Your collection has a story. Give it a place.

Seekase turns personal collections into living digital museums, built around objects, context, and the collectors behind them.

THE PROBLEM

Meaningful objects lose their context.

01

Scattered records

Photos, notes, spreadsheets, and specialist groups keep fragments of the same collection apart.

02

Marketplace framing

Existing products reduce collections to prices, listings, and transactions instead of stories and provenance.

03

Weak discovery

General social networks do not understand cabinets, categories, object metadata, or collector progress.

marketplace pressure

THE PRODUCT

A personal museum in your pocket.

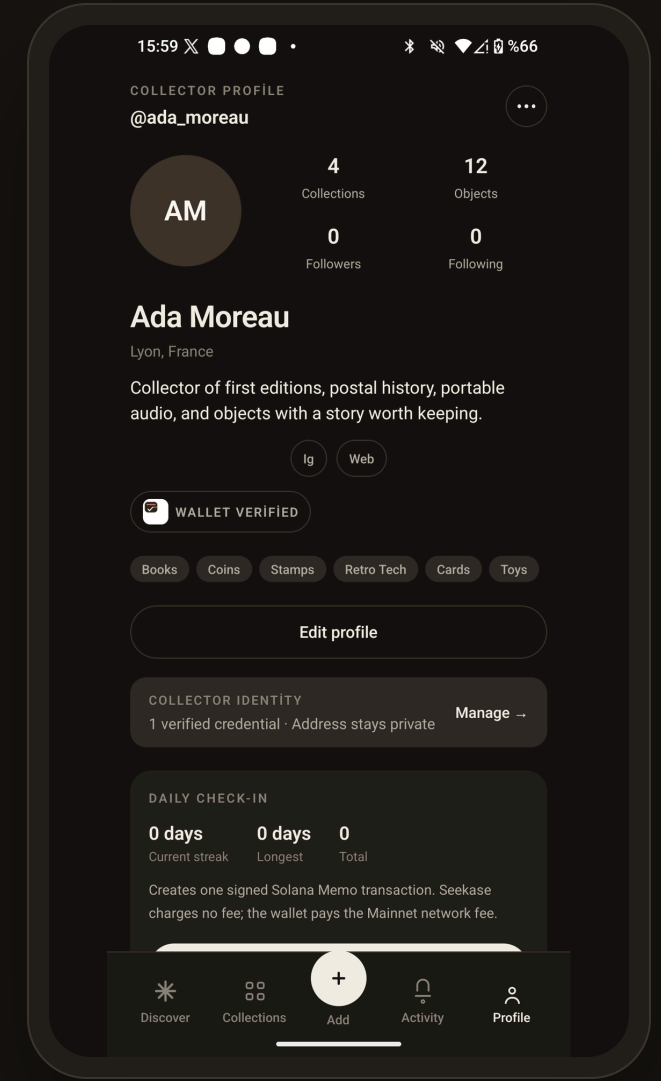

- Create named public cabinets across broad collecting categories.
- Add photographs, category-specific details, stories, dates, makers, publishers, and provenance.
- Discover collectors, follow, like, save, and comment.
- Build progress through meaningful collection and streak badges.

WHY SEEKER

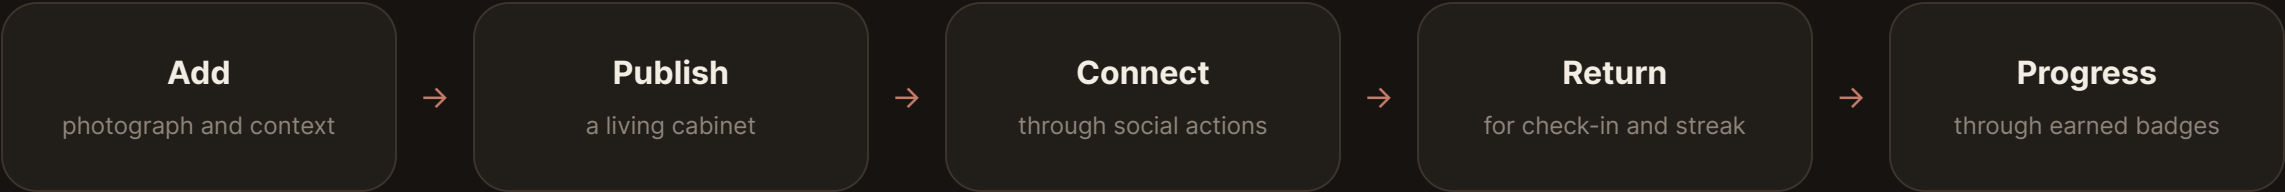

Identity and daily participation, with privacy.

- Mobile Wallet Adapter and Sign In With Solana provide wallet-first entry.
- Backend Mainnet verification produces a genuine Seeker Genesis badge.
- A daily signed Memo check-in creates a visible collecting streak.
- Wallet addresses and token details stay out of the public profile.

RETENTION LOOP

Every object creates a reason to return.

Build your collector identity

Public collections. Private wallet identity.

WORKING TODAY

A release-signed product on a physical Seeker.

- Wallet and email account entry
- Profiles, collections, items, and image upload
- Discover, search, follows, likes, saves, comments, and activity
- Reporting, blocking, support, and account deletion
- Seeker Genesis verification and Mainnet daily check-in
- 69-category icon system and consistent English interface
